### ABSTRACT

In this work we use Equal Opportunity (EO) doctrines from political philosophy to make explicit the normative judgements embedded in different conceptions of algorithmic fairness. We contrast formal EO approaches that narrowly focus on *fair contests* at discrete decision points, with substantive EO doctrines that look at people's *fair life chances* more holistically over the course of a lifetime. We use this taxonomy to provide a moral interpretation of the impossibility results as the incompatibility between different conceptions of a *fair contest* – forward-facing versus backward-facing – when people do not have *fair life chances*. We use this result to motivate substantive conceptions of algorithmic fairness and outline two plausible *fair decision procedures* based on the luck egalitarian doctrine of EO, and Rawls's principle of fair equality of opportunity.

### 1 EQUALITY OF OPPORTUNITY

Equality of Opportunity (EO) is a philosophical doctrine that objects to morally arbitrary and irrelevant factors affecting people's access to desirable positions, and the social goods attached to them (such as opportunity and wealth). In an EO-respecting society, all people, irrespective of their morally arbitrary characteristics, such as socio-economic background, gender, race, or disability status, have comparable access to the opportunities that they desire. Similarly, in fair machine learning (fair-ML), we are usually interested in ensuring that the outputs of algorithmic systems, specially those used in critical social contexts, do not systematically skew along the lines of membership in protected groups based on gender, race, or disability. In so far as protected groups are constructed on the basis of morally arbitrary factors, the moral desiderata of EO doctrines from political philosophy align exactly with the fairness-related concerns in machine learning. In this work, we employ ideas from the rich EO literature from political philosophy [2, 3, 6, 14, 15, 23, 26, 30–33]

to clarify the normative foundations of fairness and justice-related interventions, and gauge the efficacy of current algorithmic approaches that attempt to codify these criteria.

#### 1.1 Principles of EO

There are two broad principles of EO, namely, *the principle of fair contests* and *the principle of fair life chances*.

1.1.1 *Fair contests*. The principle of fair contests, commonly understood as the *nondiscrimination principle*, says that competitions for desirable positions should be open to all and should be adjudicated based on competitors' relevant merits, or qualifications. In any fair contest, the most qualified person wins. Conversely, fair contests do not judge competitors on the basis of irrelevant characteristics, especially excluding morally arbitrary factors such as gender, race, and socio-economic status that are not properly understood as qualifications at all.

The principle of fair contests has been very influential in fair-ML and has guided statistical measures and algorithmic interventions that conceptualize *fairness* as *nondiscrimination*.

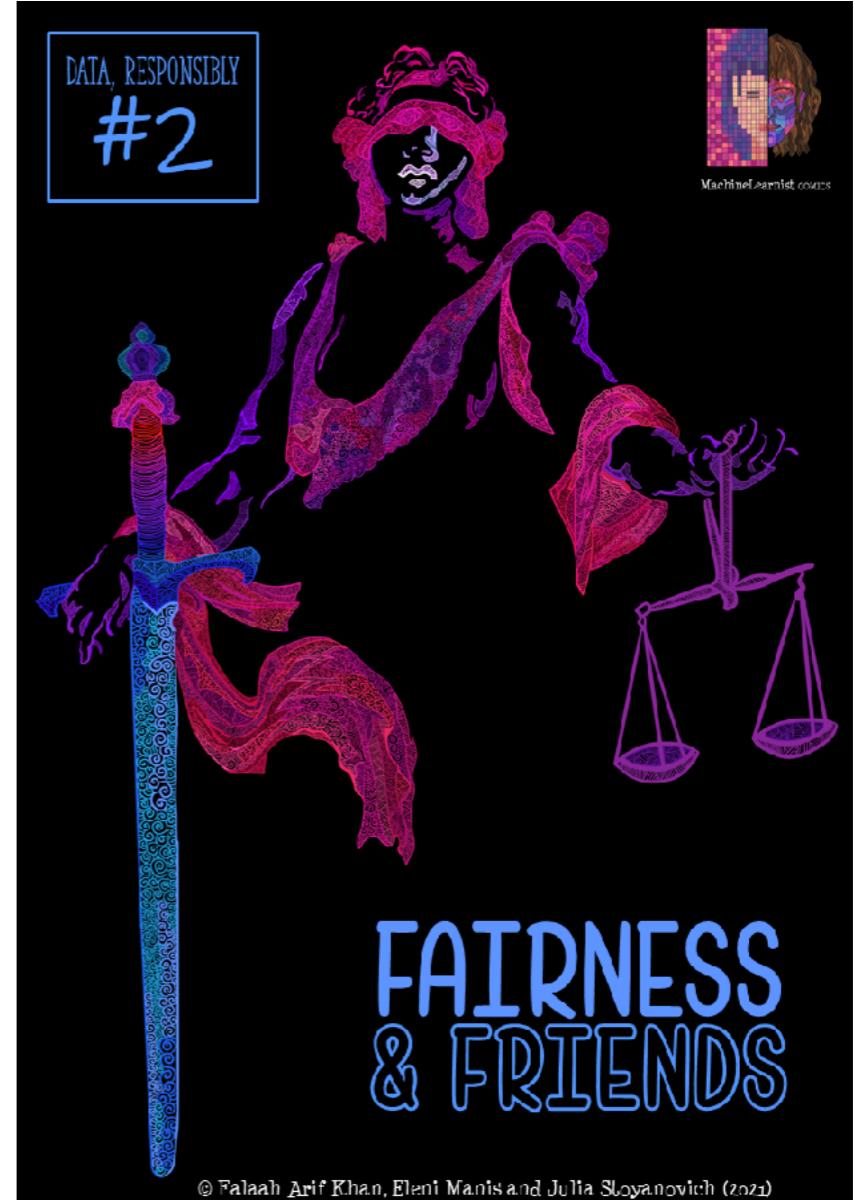

1.1.2 *Fair life chances*. The principle of fair life chances says that people's chances of success over a lifetime should not depend on morally arbitrary factors. It takes a holistic view of equal opportunity by comparing the *opportunity sets* that people have over the course of a lifetime, and is popularly understood as a principle that *levels the playing field*.

The principle of fair life chances has been almost entirely overlooked in fair-ML, and this omission explains some of the limitations in current approaches, as we will discuss shortly.

#### 1.2 Domains of EO

According to Fishkin [15], there are, broadly, three domains of EO:

1.2.1 *Fairness at a specific decision point*. The first domain comprises the discrete points at which social goods, such as employment, admissions, and loan decisions are distributed. EO doctrines compel us to think about whether outcomes of decision-making at discrete decision points are influenced by morally arbitrary factors.

# Recall: The problem with the trolley problem

back to fairness

r/ai

# Fair resource allocation

executive

sous chefs

line chefs

# Fair resource allocation

# Which fairness metric?

Which ‘Fairness’ metric is suitable for our particular context?

Is it **Equality in the Distribution** of some commodity/ outcome? (in the economic sense)

Is it so mention of **Distributive Justice?** (from political philosophy)

Is it **Non-Discrimination?** (from legal doctrines)

Maybe we can get some guidance from political philosophy!

# Meet Equality of Opportunity (EO)

♪ Your daddy is rich...  
and your mama's good looking ♪  
...but that won't help you  
in an EO world

# Principles of EO

**Fair contests:** competitions should only judge people based on morally relevant “merit” (i.e., qualifications), not based on morally arbitrary factors (e.g., gender, race, socio-economic status)

**Fair life chances:** level the playing field over a lifetime

# Domains of EO

## **(1) Fairness at a specific decision point**

- distribution of social goods: e.g., employment, loans

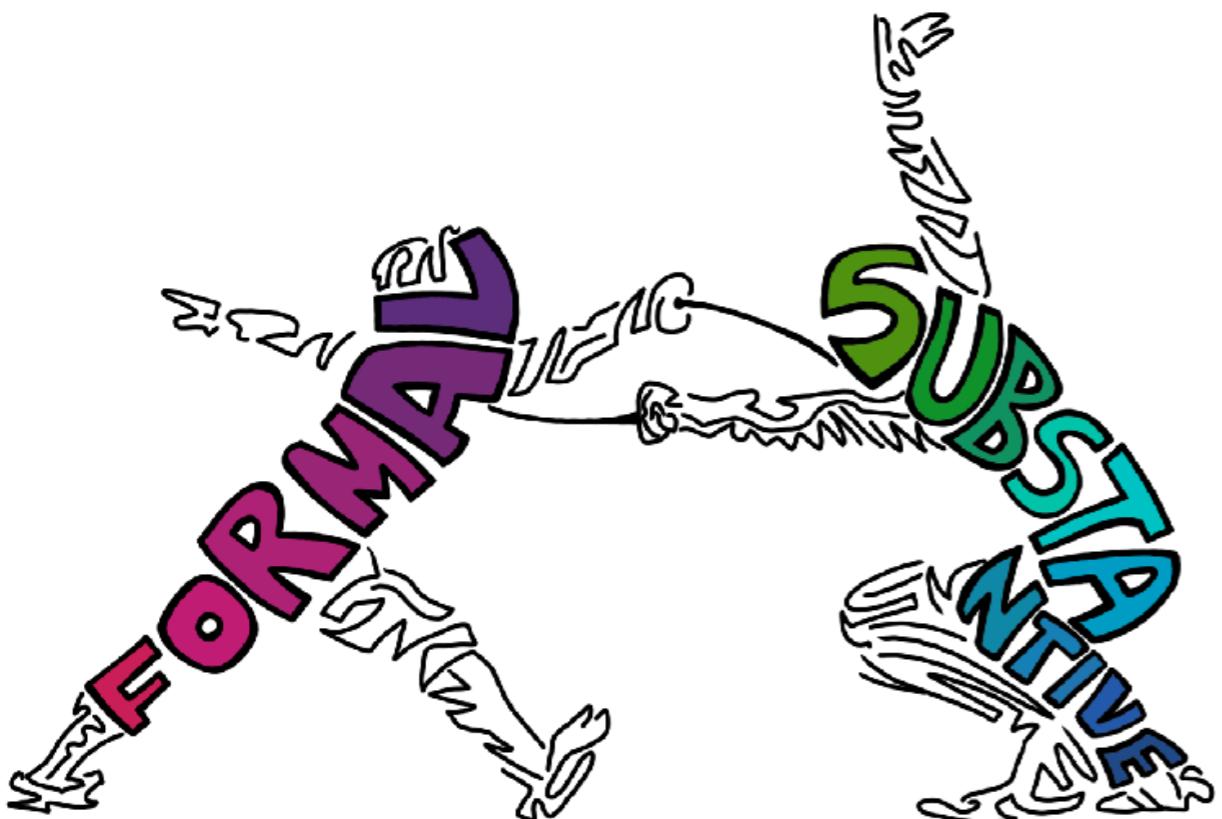

## **(2) Equality in developmental opportunity**

- access to opportunities that shape one's ability to compete for positions at a decision point (1)

## **(3) Equality of opportunity over a lifetime**

- access to comparable opportunity sets over a lifetime

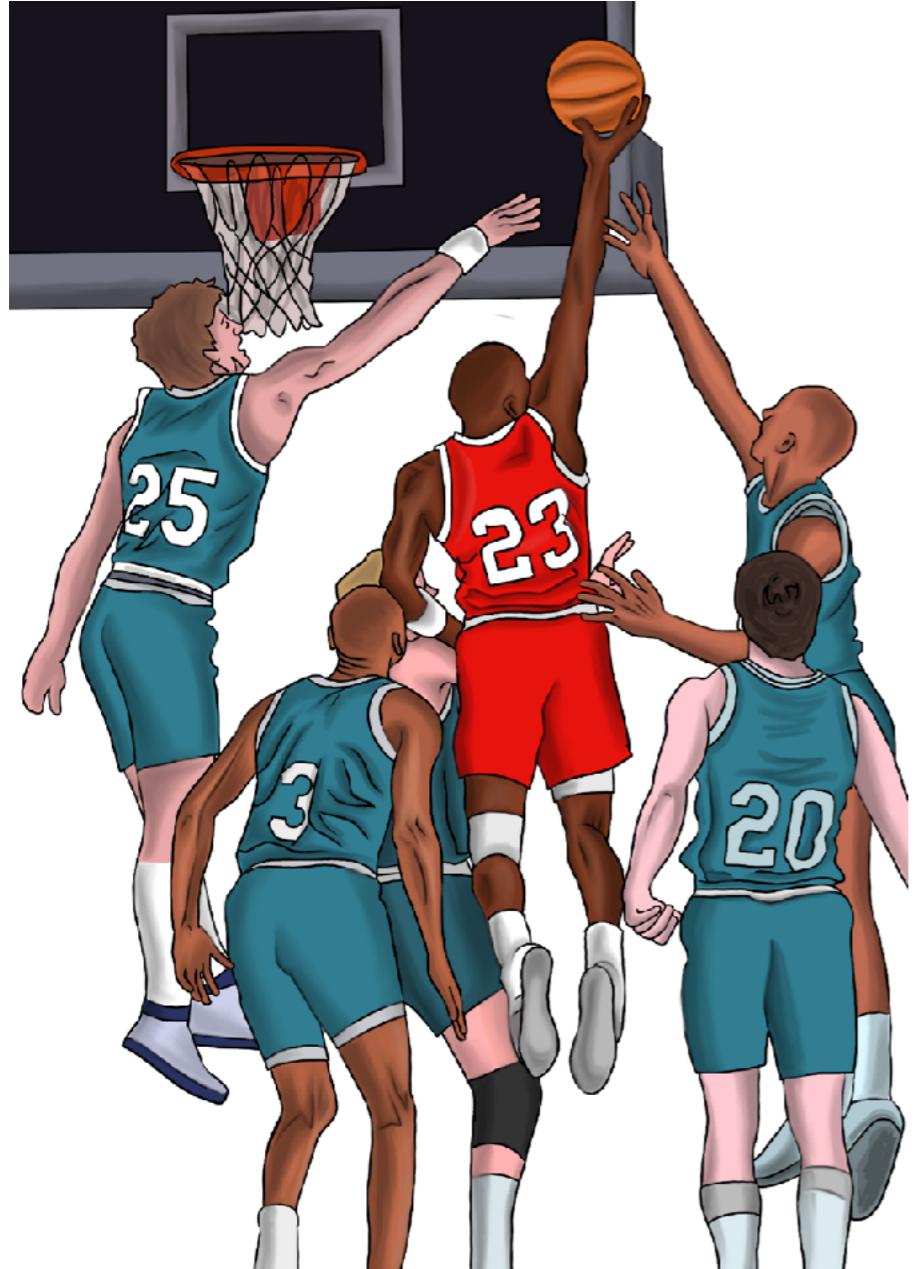

# Summary of EO doctrines

**Formal, formal-plus:** fair contests, at a single decision point

**Substantive:** fair contests, fair life chances, over the course of a lifetime

# Group fairness as EO

## Group fairness

- Protected group membership is irrelevant to correct or positive classification

## Equality of Opportunity / Substantive

- Irrelevant characteristics (such as group membership) don't affect outcomes

# Individual fairness as EO

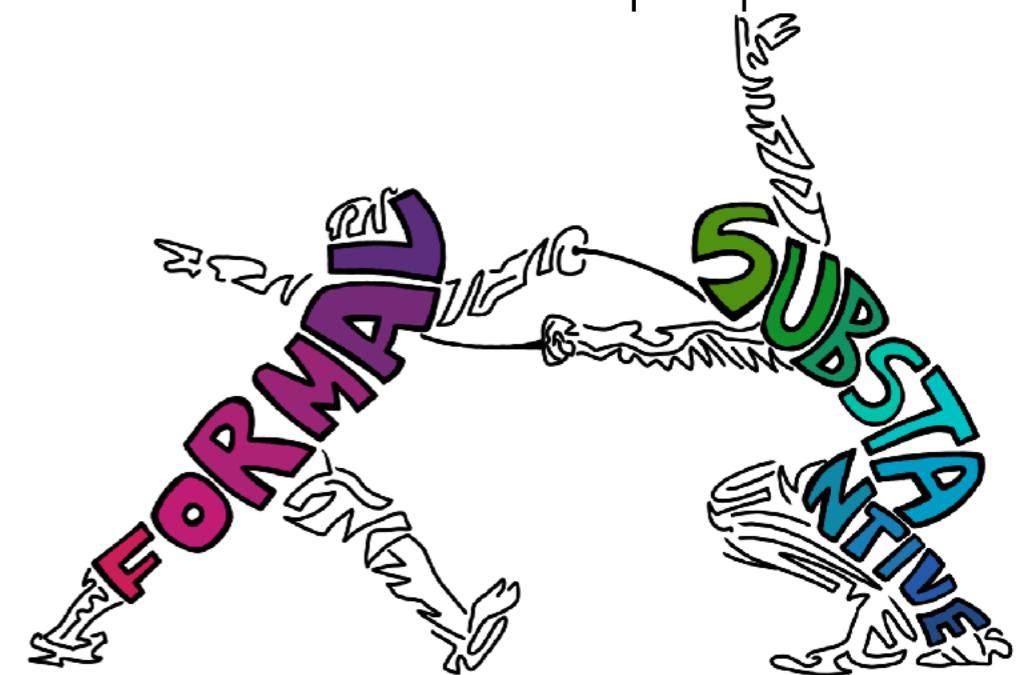

## Individual fairness

- Similar treatment of similar individuals
- Only irrelevant characteristics separate similar people

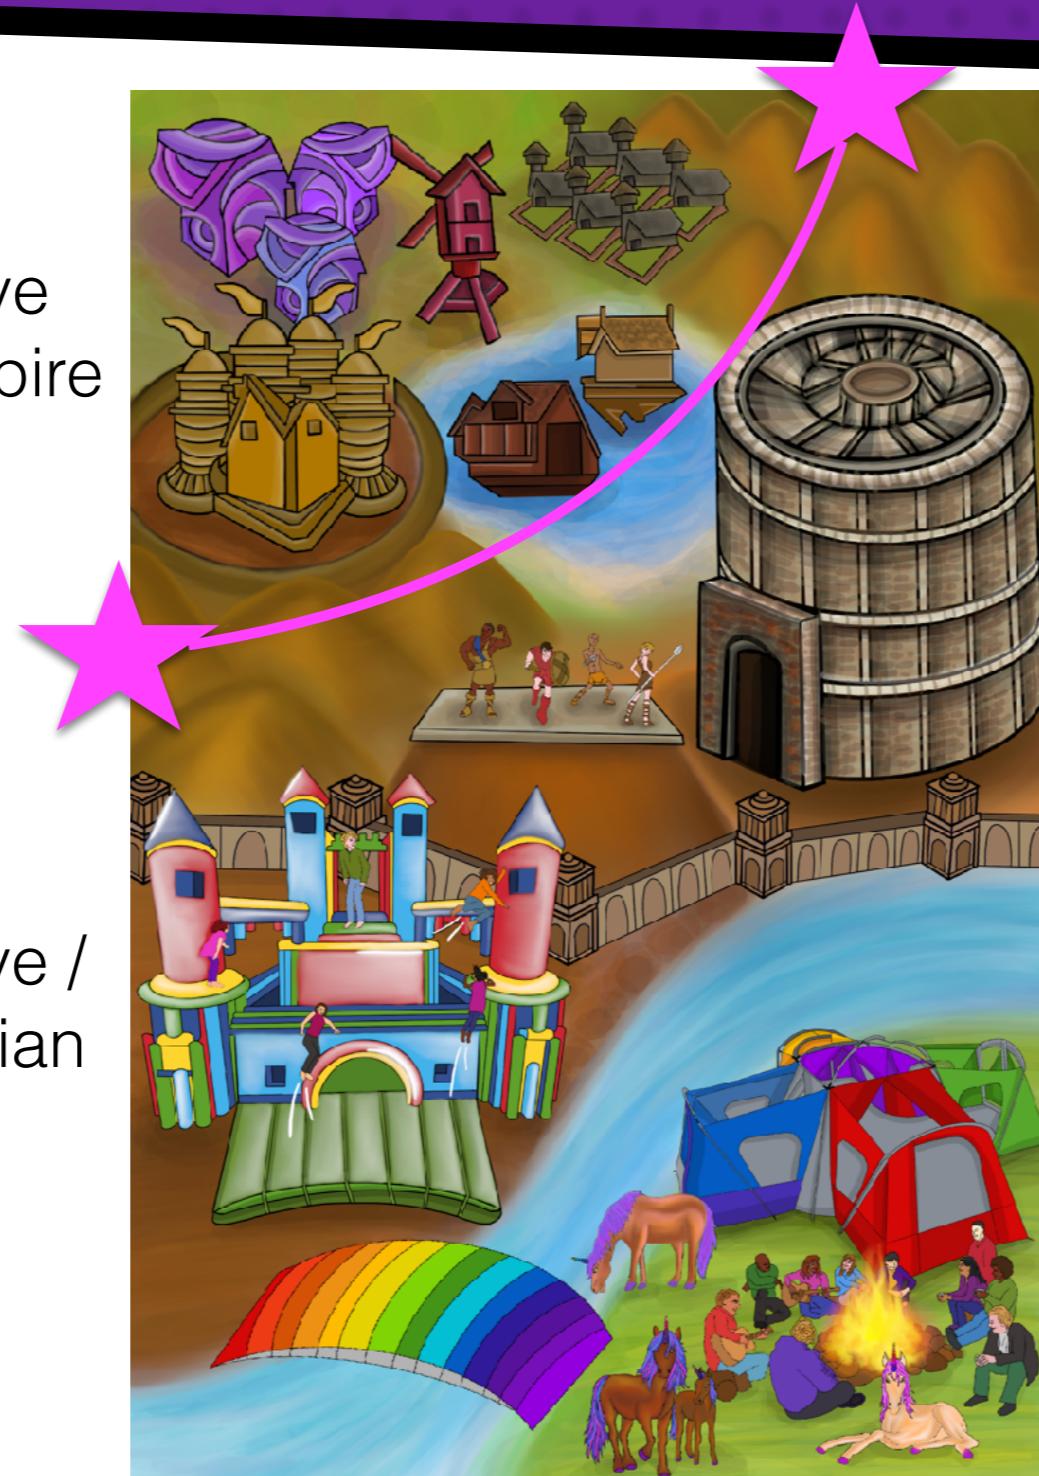

## Equality of Opportunity / Formal

- Irrelevant characteristics don't lead to different treatment of similar people

# The EO Empire

Libertarians now live outside the EO empire

**Formal-ville**

substantive /  
Rawlsian

substantive /  
luck egalitarian

# Formal EO: Careers open to talents

- In any contest, applicants should only be judged by job-relevant qualifications
- “See nothing irrelevant, speak nothing irrelevant, hear nothing irrelevant”
- Codified as “**fairness through blindness**” with its known weaknesses

# Formal EO as calibration

Calibration:

$$P(y = 1 | y' = c, s = 0) = P(y = 1 | y' = c, s = 1)$$

If two individuals have the same predicted score  $y'$  (relevant merit) and only differ on group membership  $s$  (morally irrelevant factors), then they are likely to get the same outcome from a well-calibrated test.

# Formal EO as predictive parity

Predictive parity:

$$P(y = 1 | y' > p, s = 0) = P(y = 1 | y' > p, s = 1)$$

If two individuals both have job-relevant qualifications  $y' > p$  (relevant merit) and only differ on group membership  $s$  (morally irrelevant factors), then they are likely to get the same outcome.

# Formal EO: Test validity

- A test that systematically under / over estimates people in a way that tracks group membership violates formal EO
- Measures of accuracy or test validity should be broken out by demographic group

# Formal-plus EO as error rate balance

Error rate balance:

$$P(y' > p \mid y = 0, s = 0) = P(y' > p \mid y = 0, s = 1)$$

$$P(y' \leq p \mid y = 1, s = 0) = P(y' \leq p \mid y = 1, s = 1)$$

A test with balanced error rates at a threshold  $p$  captures formal-plus EO's conception of a fair contest because it ensures that test performance (i.e., false-positive rate and false-negative rate) does not skew with morally irrelevant group membership

**"Equal opportunity"** [Hardt et al. 2016] codifies formal-plus EO

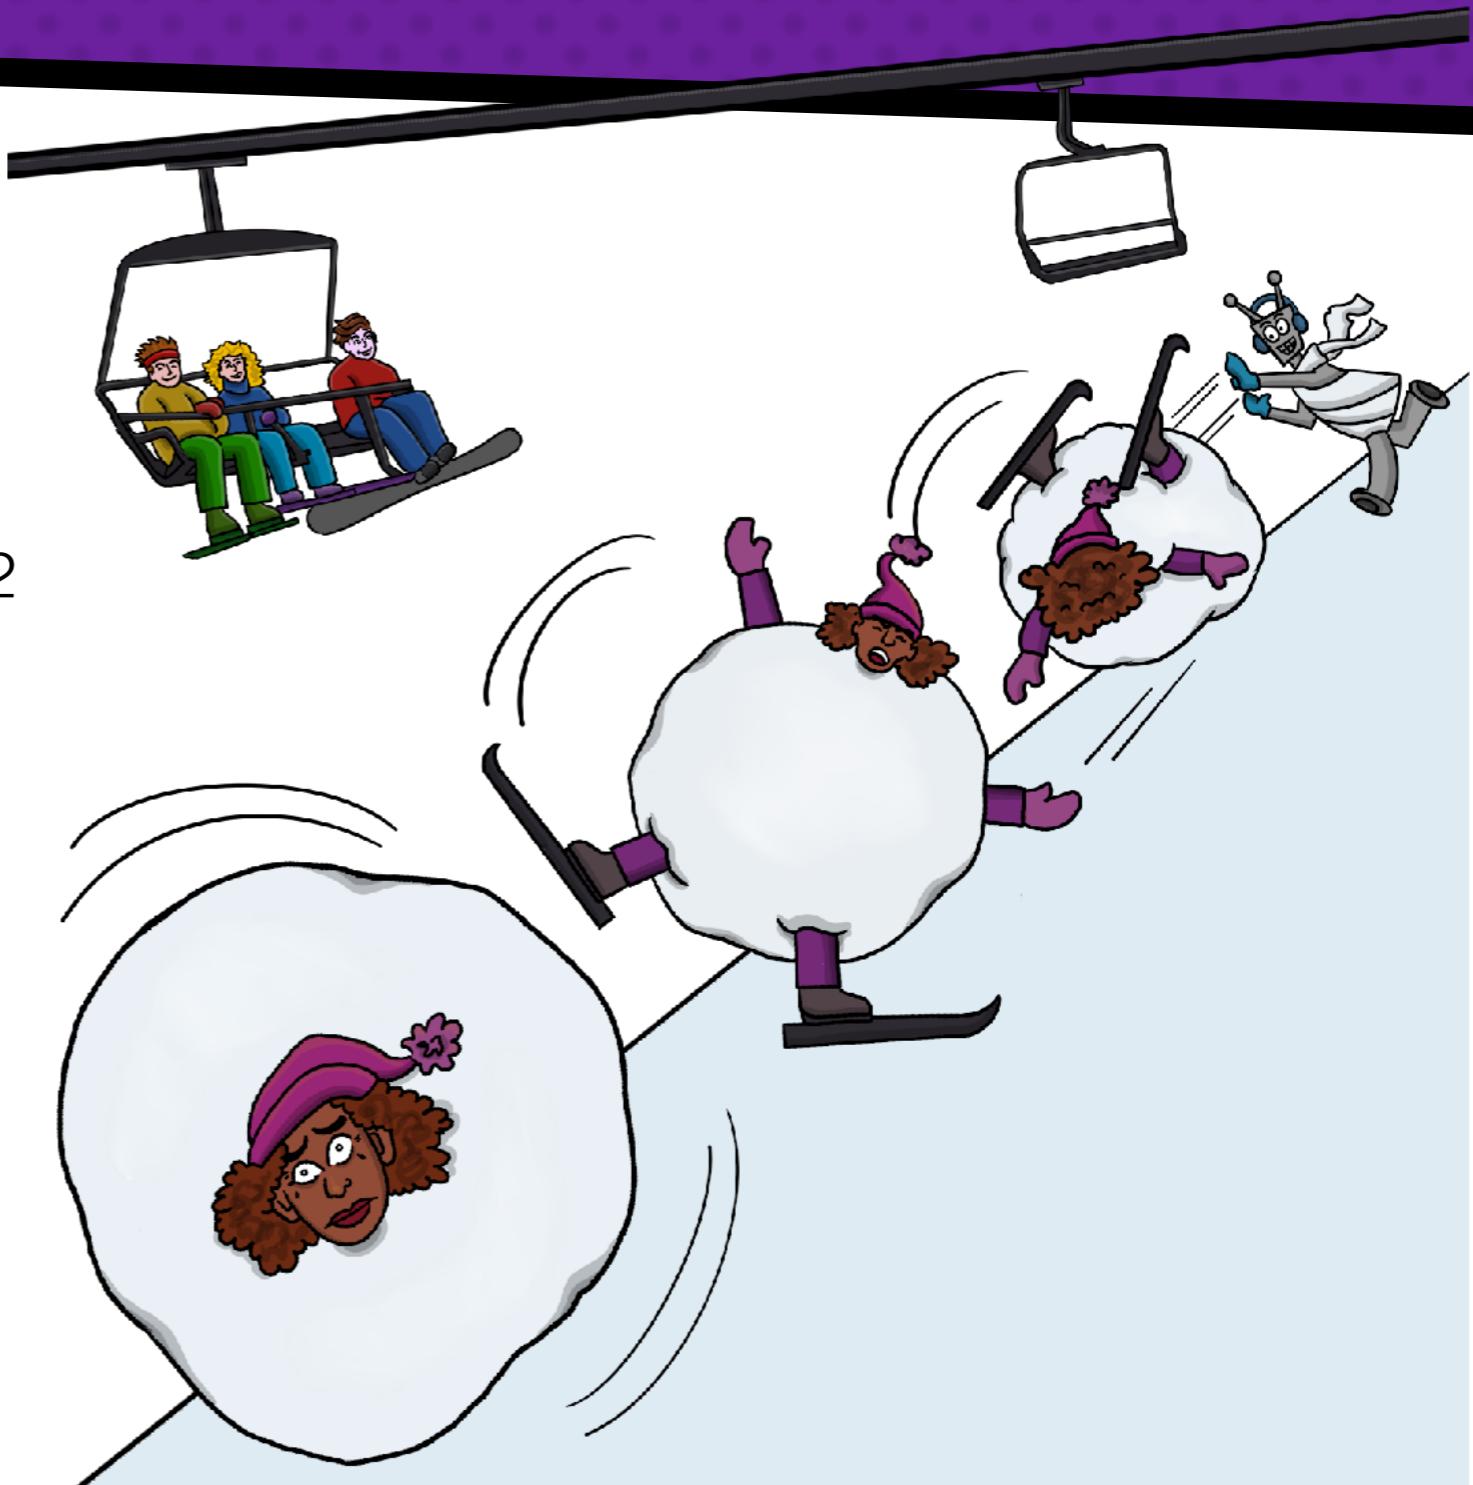

# Limitation of formal EO: the “before” problem

- Formal EO's appeal: relevant skills in, irrelevant characteristics out
- But OK to use irrelevant privileges before competition
- So privileges affect competition outcomes

# Limitation of formal EO: the “after” problem

- Winners at time 1 gain improved characteristics for competing at time 2
- Winners win faster, losers lose faster

# “Before” + “after” → discrimination laundering

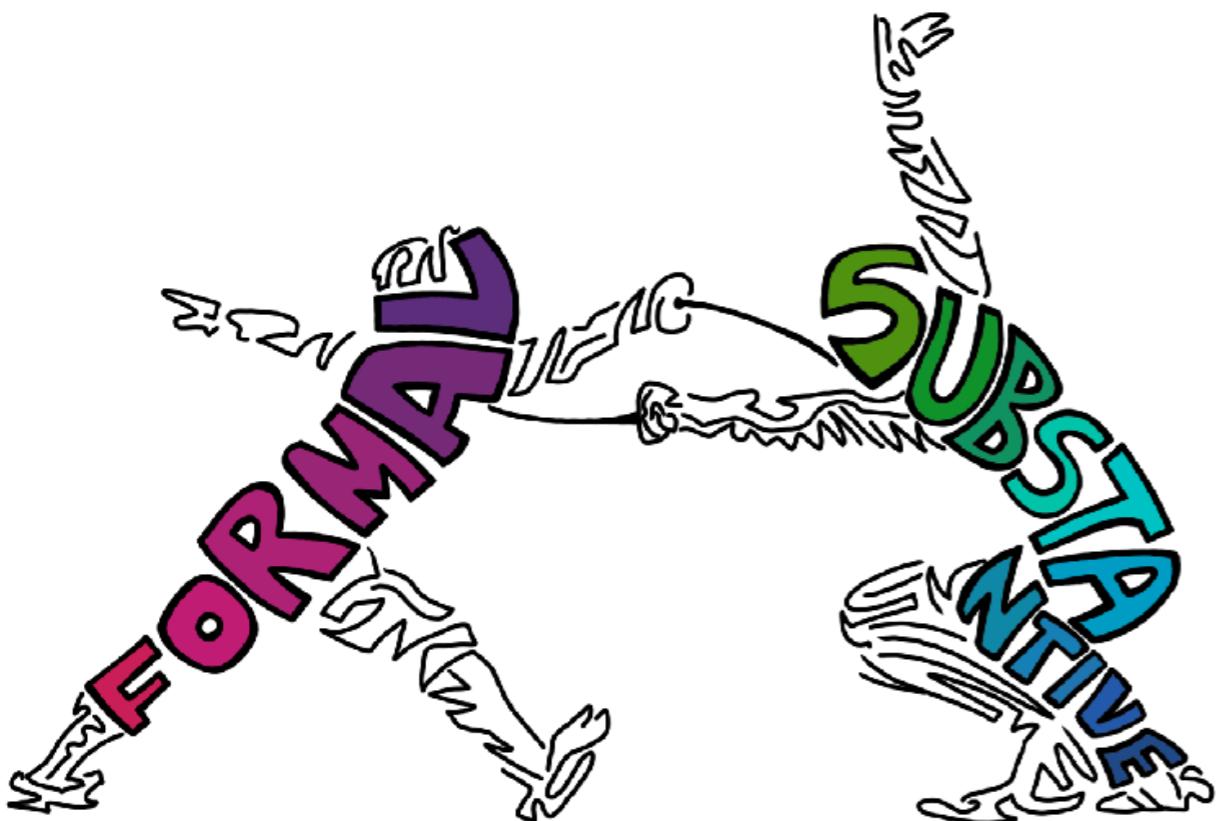

- Real world discrimination against some leads to privileges for others
- According to formal EO, it's OK to convert privileges to qualifications
- Winning on the basis of qualifications leads to more winning on qualifications
- Discrimination recedes from view...

*“Racial discrimination in on-the-job training is illegal; discrimination on the basis of differences in human capital due to differences in on-the-job training is not”*

(Elizabeth Anderson, The Imperative of Integration)

# Summary of EO doctrines

**Formal, formal-plus:** fair contests, at a single decision point

**Substantive:** fair contests, fair life chances, over the course of a lifetime

# The EO Empire

Libertarians now live outside the EO empire

**substantive /  
Rawlsian**

Formal-ville

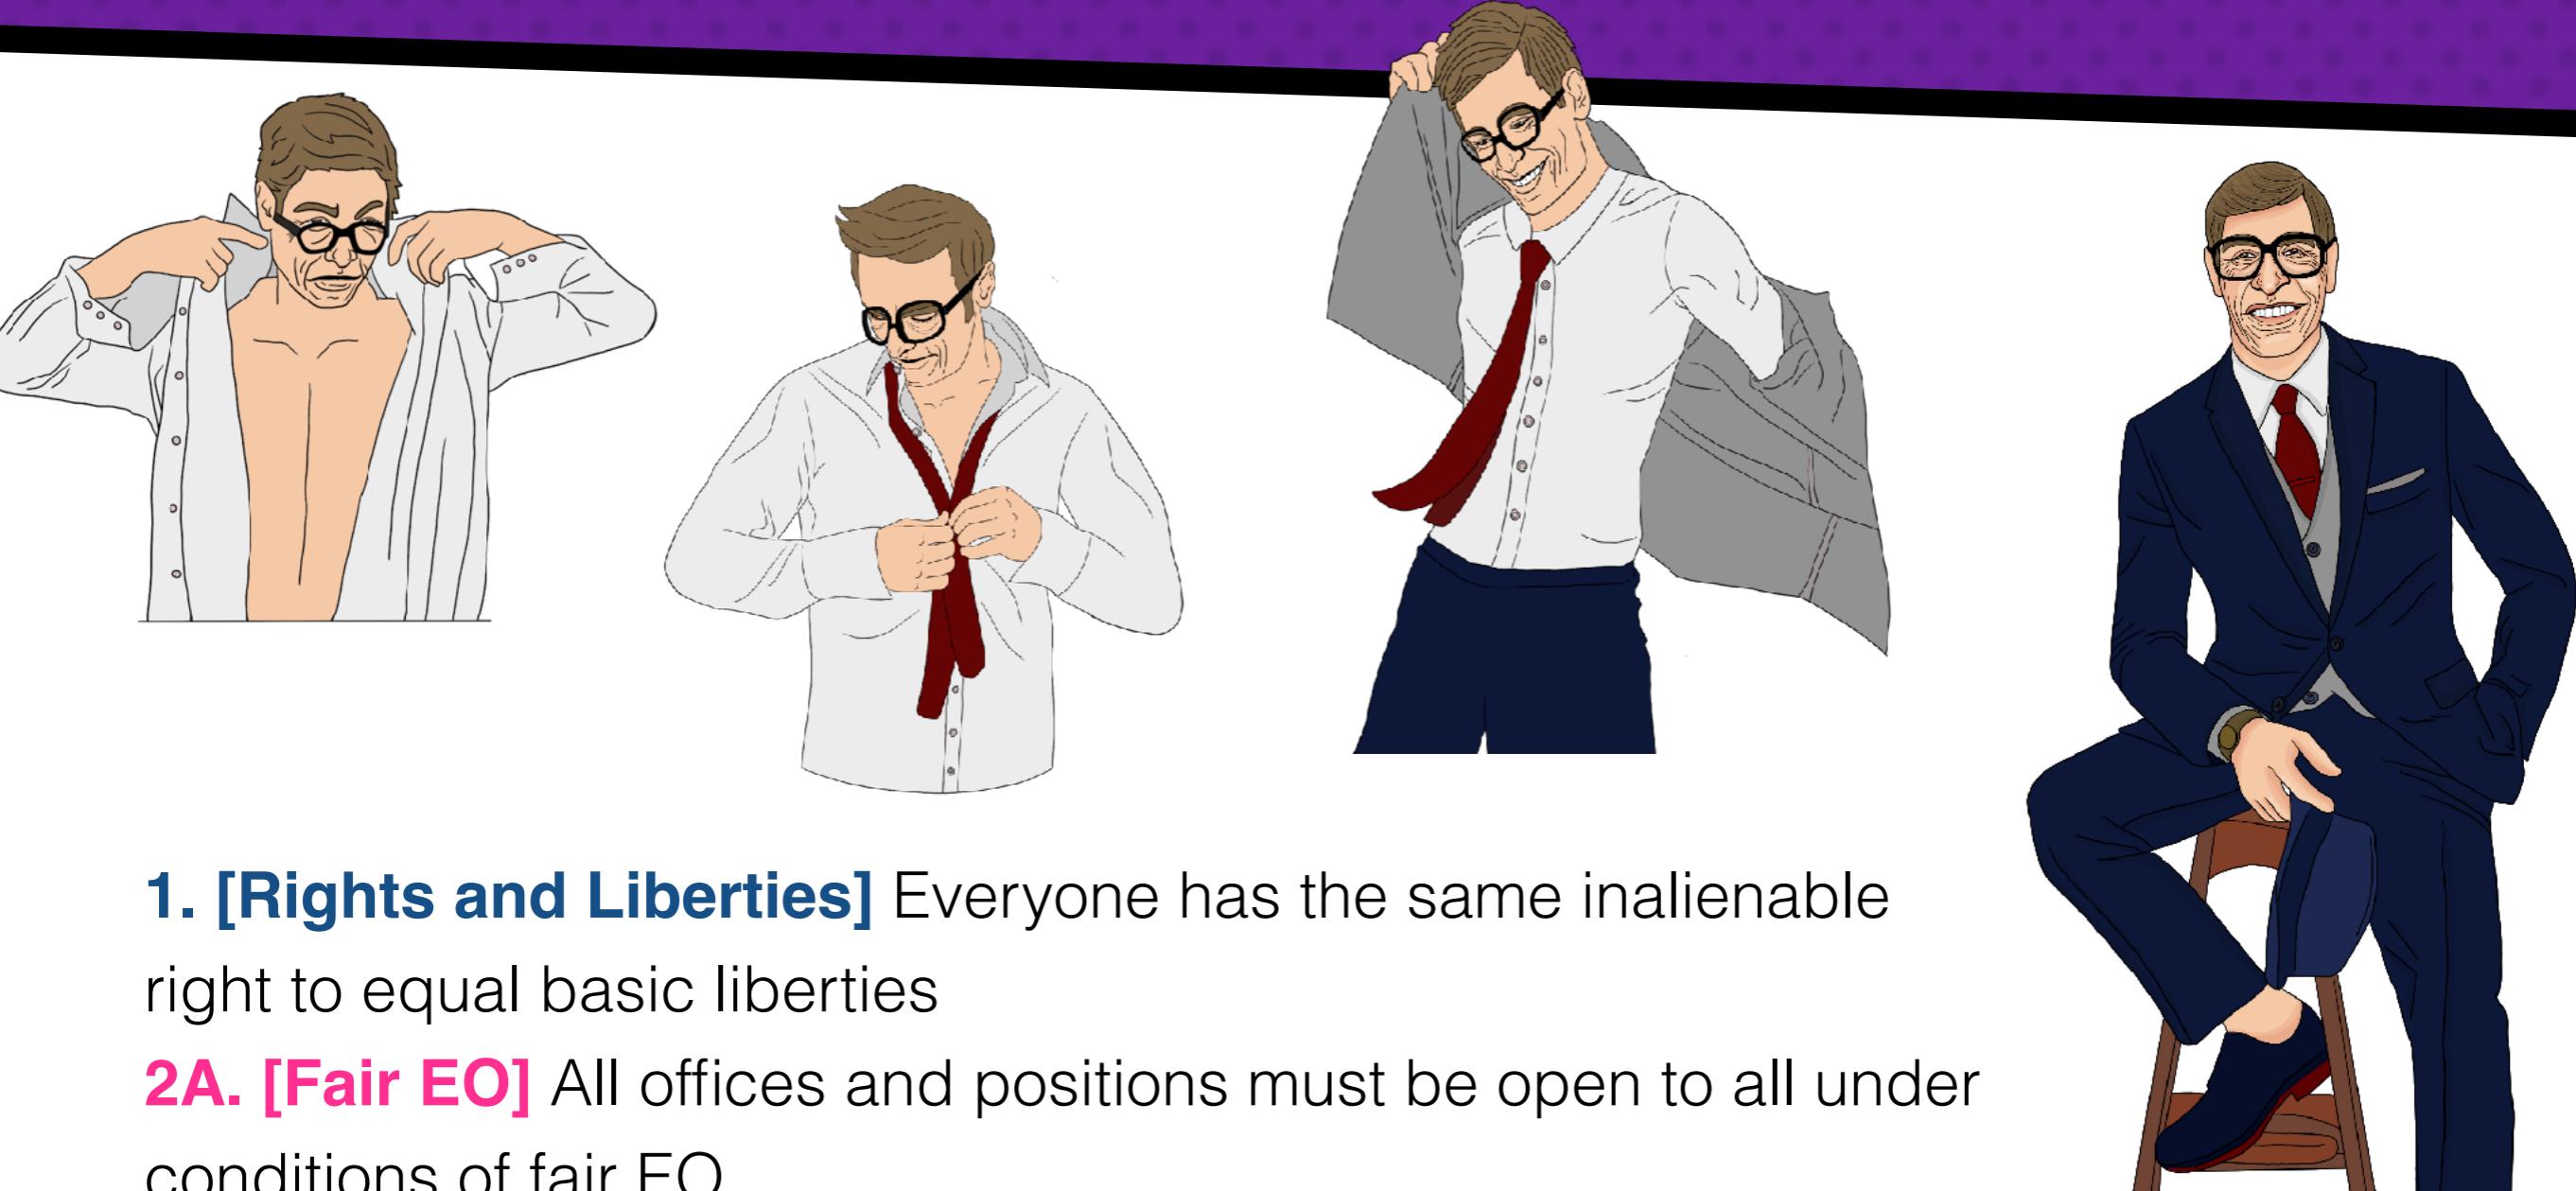

substantive /  
luck egalitarian

# Substantive EO: Rawls

- Equally talented babies must have equal life prospects
- Emphasis is on equality of **developmental opportunities**
- All people - rich or poor - must have the same opportunities to develop their qualifications, so that at the point of competition they are equally likely to succeed

# Rawls' broader view of justice

**1. [Rights and Liberties]** Everyone has the same inalienable right to equal basic liberties

**2A. [Fair EO]** All offices and positions must be open to all under conditions of fair EO

**2B. [Difference Principle]** Social and economic inequalities must be of the greatest benefit to the least advantaged

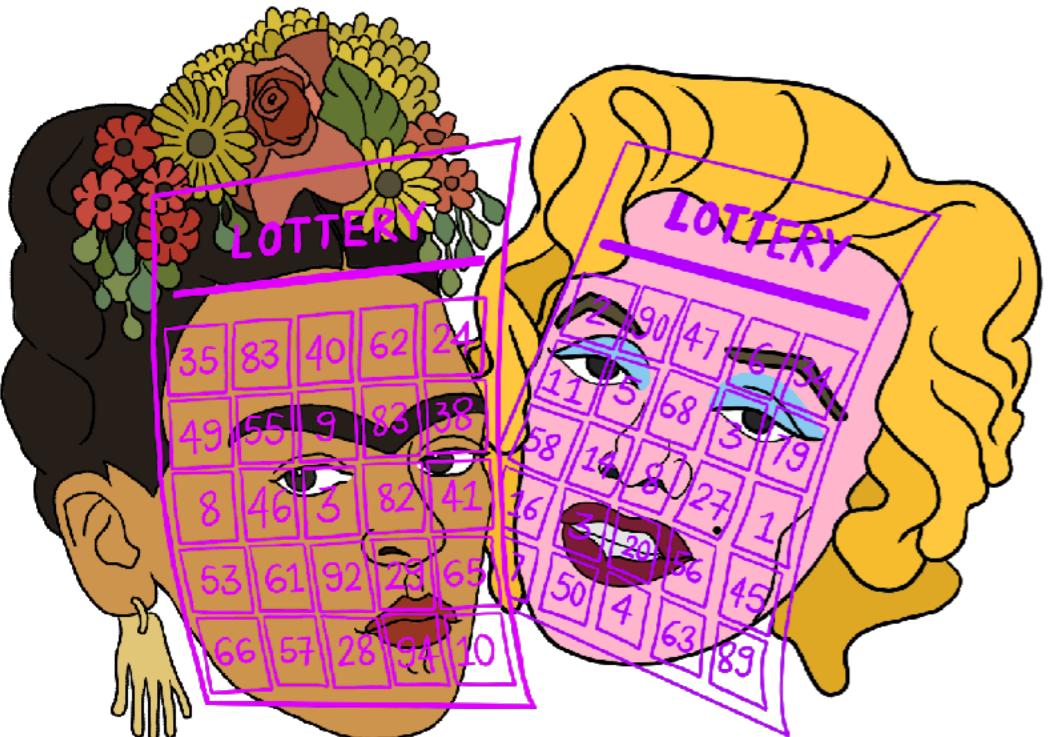

# Misconceptions of Rawls in Fair-ML

- In fair-ML, statistical parity and equality of odds are believed to operationalize Rawlsian fair EO. But this is not so!
- Rawlsian EO is fundamentally about providing developmental opportunities **before** competitions, and about ensuring that opportunity sets are comparable **over a lifetime**

# Substantive EO: Rawls: natural & social lottery

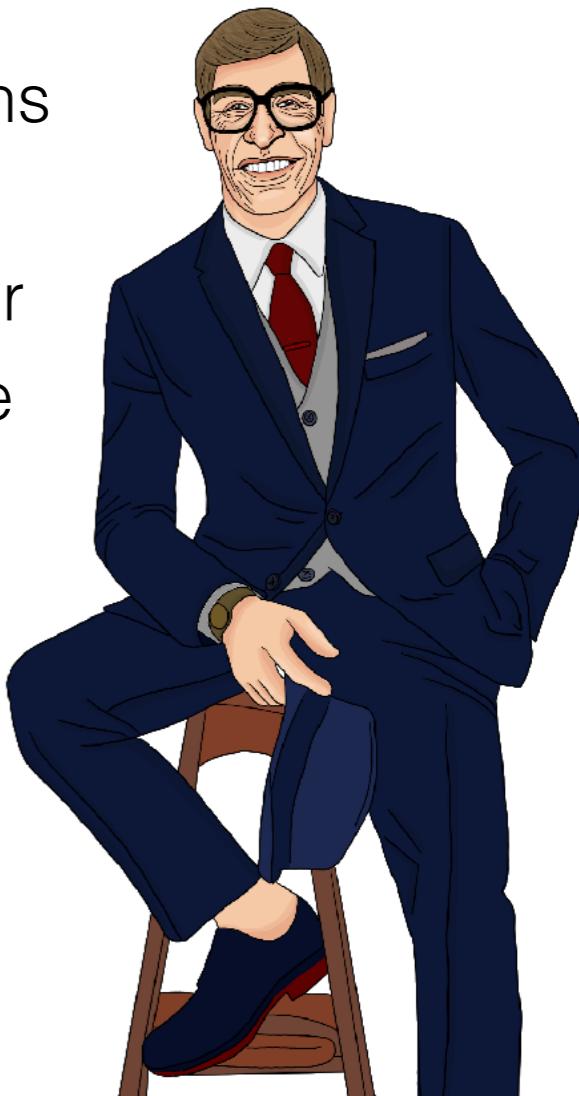

**Difference principle (maximize the minimum):** Since we don't deserve our starting points in life, we must work towards a social system that serves everyone.

**Natural & social lottery:** Talents and fortune are distributed arbitrarily.

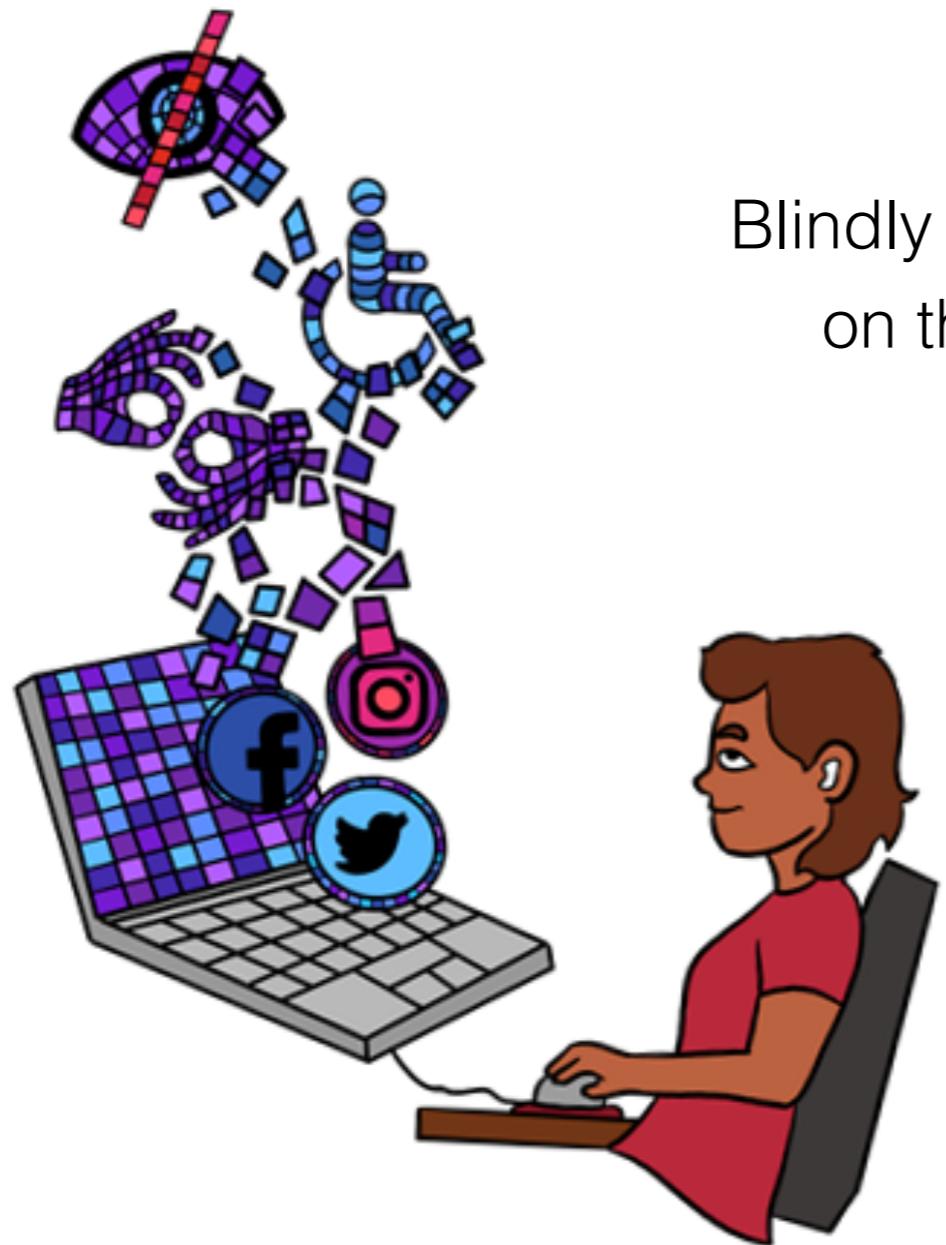

# Rawls' “original position”

**The Veil of Ignorance:** If citizens do not know their race, class, sex, social position (or any other characteristics that might cause them to favor people like themselves), they will advocate for all social positions and their attached privileges to be distributed fairly.

# Broader view of justice

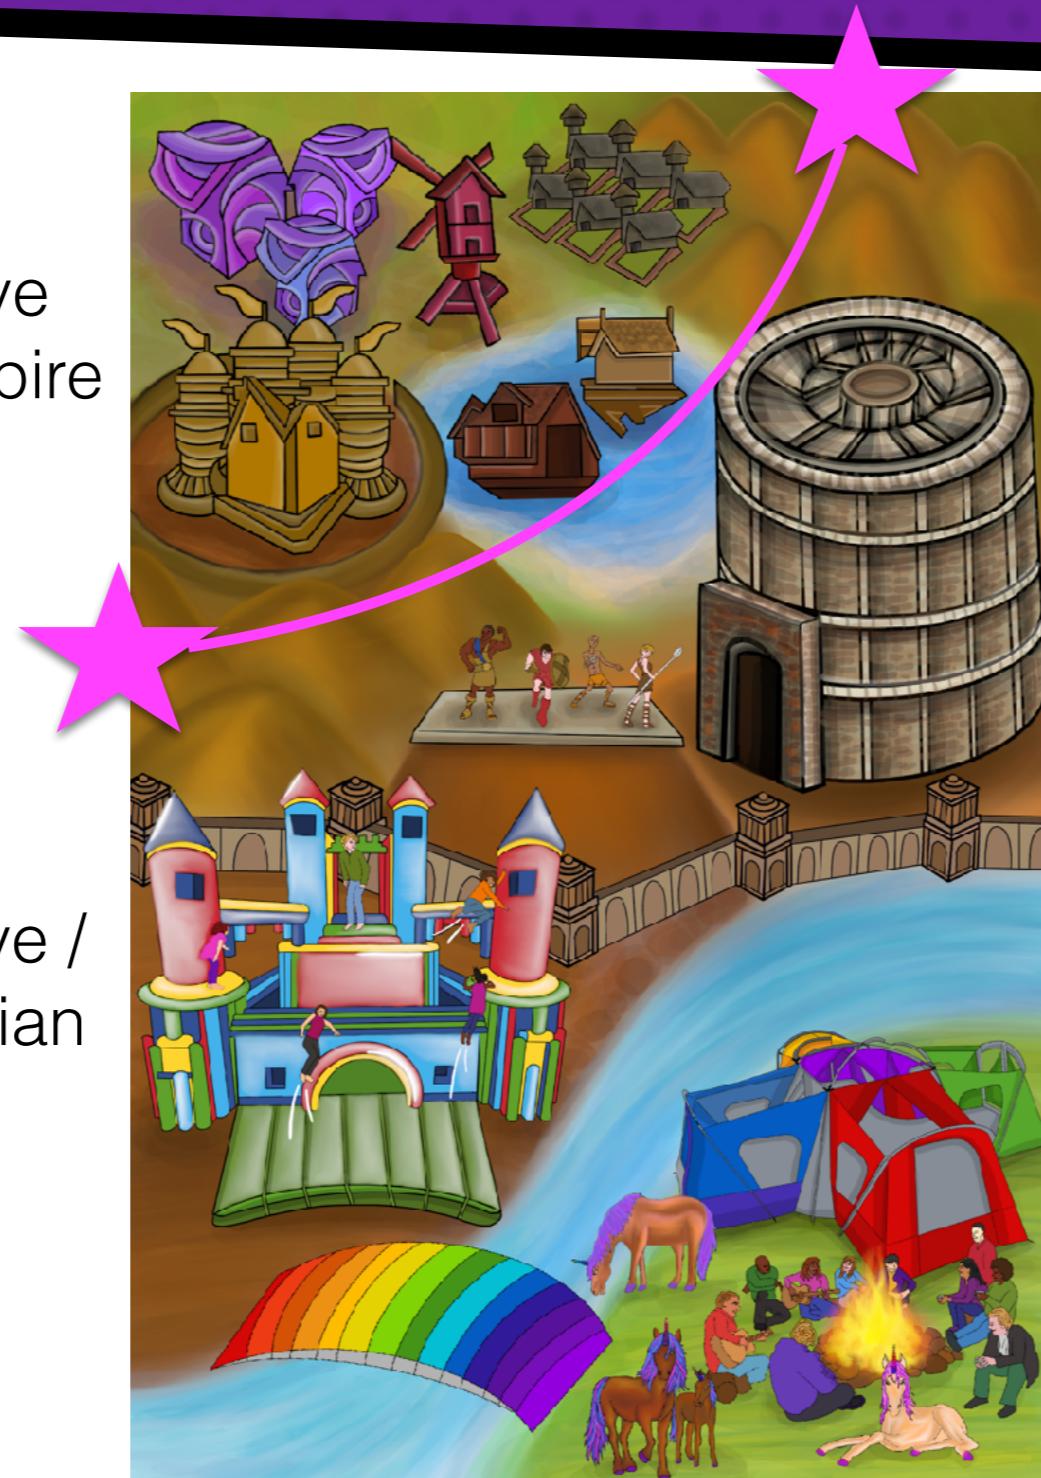

Blindly satisfying EO may infringe  
on the **freedom of speech**.

# The EO Empire

Libertarians now live outside the EO empire

Formal-ville

substantive /  
Rawlsian

substantive /  
luck egalitarian

# Substantive EO: Luck egalitarian

The luck egalitarians gather around the communal fire, forsaking all disparities in talent and effort, in favor of unicorns on rainbows!

# Substantive EO: luck egalitarian

- Outcomes should only be affected by “choice luck” (one’s responsible choices), not by “brute luck”
- But how do we make this separation?

# Substantive EO: luck egalitarian

For which characteristics can we hold an individual accountable?  
**(responsible choice)**

And which matters are completely out of their control?

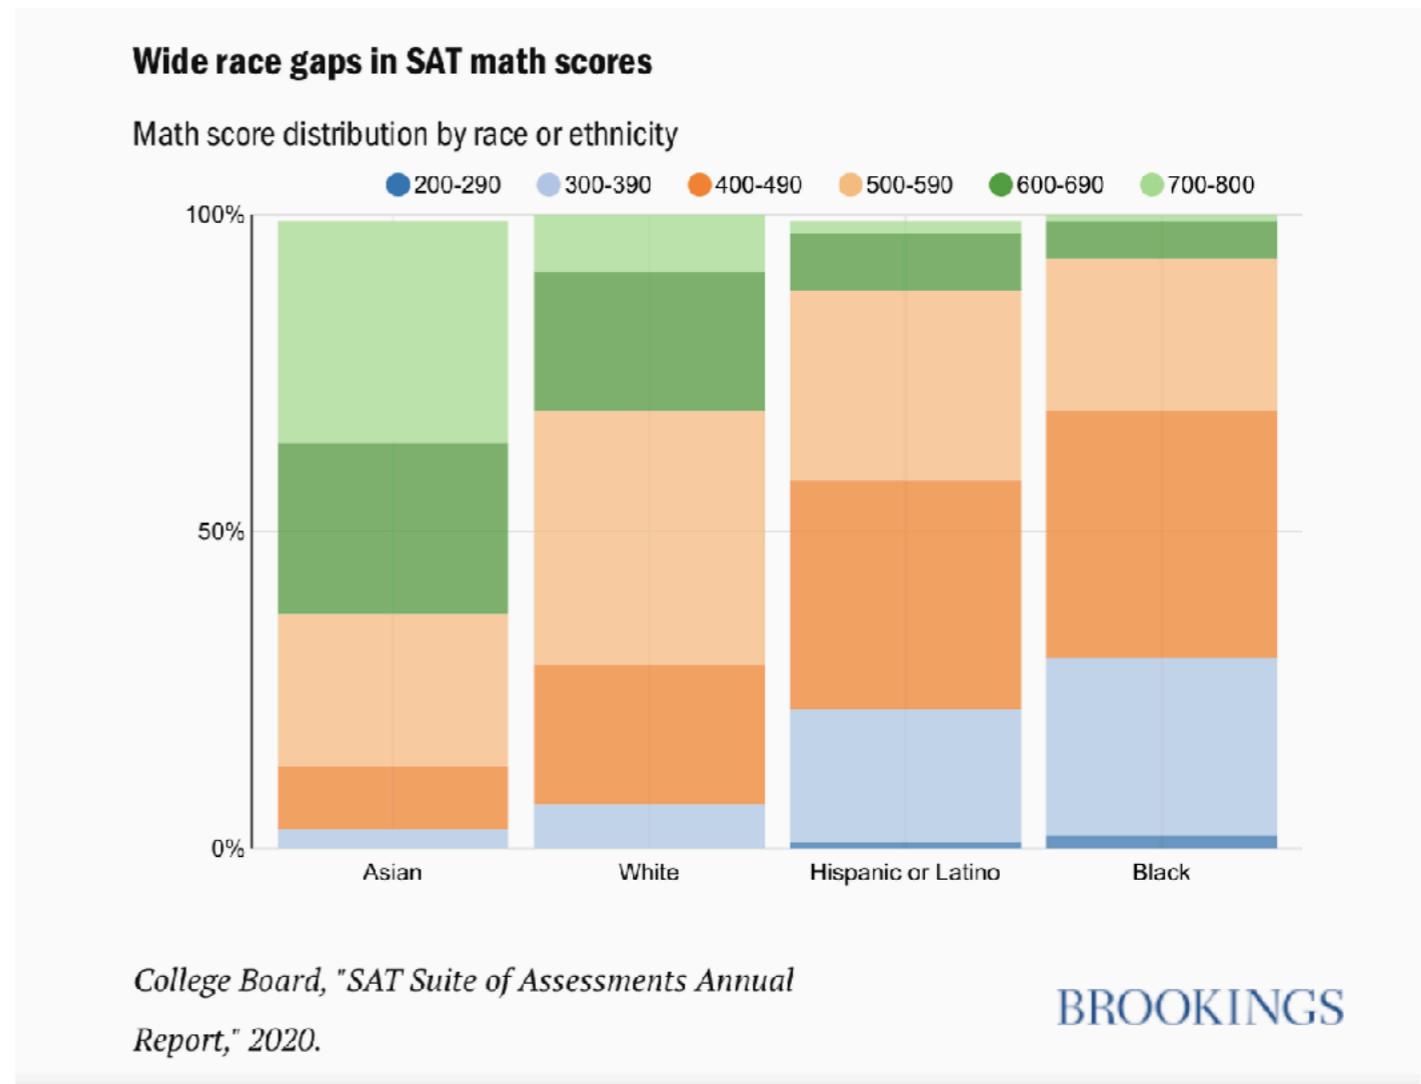

**(brute luck)**

# Substantive EO: luck egalitarian: Roemer

Effort, circumstance, and types

(Roemer, 2002)

# Substantive EO: Luck egalitarian: Roemer

- No split between responsible effort and irrelevant circumstance
- But there is still an apples and oranges problem
